

COURSE SPECIFICATION FORM

DEPARTMENT OF: Mathematics				
Course Code:	MT3620	Course Value:	0.5	
Course Title:	Cipher Systems			
Prerequisites:	MT1820 and some probability		Recommended:	
Aims:	To introduce both symmetric key cipher systems and public key cryptography covering methods of obtaining the two objectives of privacy and authentication.			
Learning Outcomes:	<p>On completion of the course the student should be able to:</p> <ul style="list-style-type: none"> • understand the concepts of secure communications and cipher systems; • understand and use statistical information and the concept of entropy in the cryptanalysis of cipher systems; • understand the structure of stream ciphers and block ciphers; • know how to construct as well as have an appreciation of desirable properties of key stream generators, understand and manipulate the concept of perfect secrecy; • understand the modes of operation of block ciphers and their properties; • understand the concept of public key cryptography, including details of the RSA and ElGamal cryptosystems both in the description of the schemes and in their cryptanalysis; • understand the concepts of authentication, identification and signature, be familiar with techniques that provide these, including one way functions, hash functions and interactive protocols, including the Fiat-Shamir scheme; • understand the problems of key management, be aware of key distribution techniques. 			
Course Content:	<p>Cipher systems: An introductory overview of the aims and types of ciphers. Methods and types of attack. Information theory. Statistical tests.</p> <p>Stream ciphers: The one time pad. Pseudo-random key streams - properties and generation.</p> <p>Block ciphers: Confusion and diffusion. Iterated ciphers - substitution/ permutation. The Feistel principle, DES, AES, Modes of operation.</p> <p>Public key ciphers: Discussion of key management. Diffie-Hellman key exchange. One-way functions and trap-doors. RSA; ElGamal cryptosystem.</p> <p>Authentication/Identification: Protocols. Challenge/response. MACs. Zero-knowledge protocols; Fiat-Shamir protocol.</p> <p>Digital signatures: Digital signature methods. Hash functions. DSS. Certificates.</p>			
Teaching & Learning Methods:	<p>33 hours of lectures and examples classes.</p> <p>117 hours of private study, including work on problem sheets and examination preparation. This may include discussions with the course leader if the student wishes.</p>			
Key Bibliography:	<p>Cryptography : theory and practice (3rd edition) - D. Stinson (Chapman & Hall/CRC, 2006) Library ref: 001.5436 STI</p> <p>Introduction to cryptography: with coding theory - W. Trappe and L.C. Washington (Pearson Prentice Hall, 2006) Library ref: 001.5436 TRA</p>			
Formative Assessment & Feedback:	Formative assignments in the form of 8 problem sheets. The students will receive feedback as written comments on their attempts.			
Summative Assessment:	<p>Exam (%) Four questions out of five in a two-hour paper: 100%</p> <p>Coursework (%) None</p> <p>Deadlines: n/a</p>
